Instructions: Enter amount into text box, drag interest rate seek bar to select interest rate between 0-20%. Pick a loan term from the radio group, and then check box to include taxes and insurance or not.

A sample run would be

Amount borrowed: \$10000

Interest: 10%

Loan term: 20

Include taxes

The result is 106.5 per month as expected.

The result is available after pressing calculate. The program defaults the loan value to zero so it will not crash after pressing calculate even without an amount value.
