Instructions: Run program from main activity. Nothing else much to say.

Main Activity.java is my recyclerView activity, ZooInfo.java is my Zoo information activity, and animal_page.java is Animal description activity.

Explanation of screenshots:

1. I first demonstrate the action bar feature, pressing the overflow menu into the zoo information.
2. Next on the zoo information page, I press the button to make a call to the “front office.
3. After checking the call feature, I test the uninstall feature on the action bar.
4. Next I check the animal pages on the recycler view, checking the information about each animal.
5. When I get to the giraffe (which is last on the list), an alertdialog pops up telling me it is scary and asking me to proceed. Pressing yes, we can see the giraffe page.
